

Science Fair

The Robert Frost PTO is sponsoring a Science Fair on Tuesday, March 15, 2016 from 6:30-8:00 pm in the multi-purpose room. Individuals, groups of friends or families are invited to participate.

To participate, students will need to fill out and return the entry form at the bottom of this letter to your teacher by Monday, March 7. If more than one student is working on a project, only one form needs to be submitted.

- The emphasis for the Robert Frost Science Fair is on learning about science by asking a scientific question and designing experiments to test it in investigation and invention as well as researching and learning about science topics of student interest.
- Local scientists, design experts, and teachers will judge the fair and provide feedback to the students.
- An internet search can be used to find ideas: kid science projects. (Links have been provided in email communication and on the information pages of each project category)
- For the science fair, a display board should be used to present the results of your project.
- Detailed information about the suggested display board presentation format will be emailed as a PDF file.
- Please refrain from using hazardous items, such as open flames, blood, etc.
- Prizes sponsored by
